POPULATION

The five stages of the demographic transition

The demographic transition is a model that describes why rapid population growth is a temporary phenomenon.

	Stage 1	Stage 2	Stage 3	Stage 4	Stage 5
Birth rate	High	High	Falling	Low	Yet to be seen (Possibly falling further, possibly rising again)
Death rate	High	Falls rapidly	Falls more slowly	Low	Low
Natural increase	Stable or slow increase	Rapid increase	Increase slows down	Falling and then stable	Little change
Population Pyramid					
	Men Women	Men Women	Men Women	Men Women	Men Women

This is a visualization from [OurWorldinData.org](https://ourworldindata.org), where you find data and research on how the world is changing.

Women's educational attainment vs. number of children per woman

Shown on the x-axis is the average number of years of schooling of women in the reproductive age (15 to 49 years). On the y-axis you find the 'total fertility rate' – the number of live births per woman in reproductive age.

HEALTH BENEFITS

- Reduces maternal mortality & morbidity
 - Reduces infant and child mortality
 - Reduces rates of unintended pregnancy
 - Reduces rates of unsafe abortions
 - Increases health overall
-

Voluntary Family Planning and Reproductive Health care

SOCIAL, ECONOMIC & ENVIRONMENTAL BENEFITS

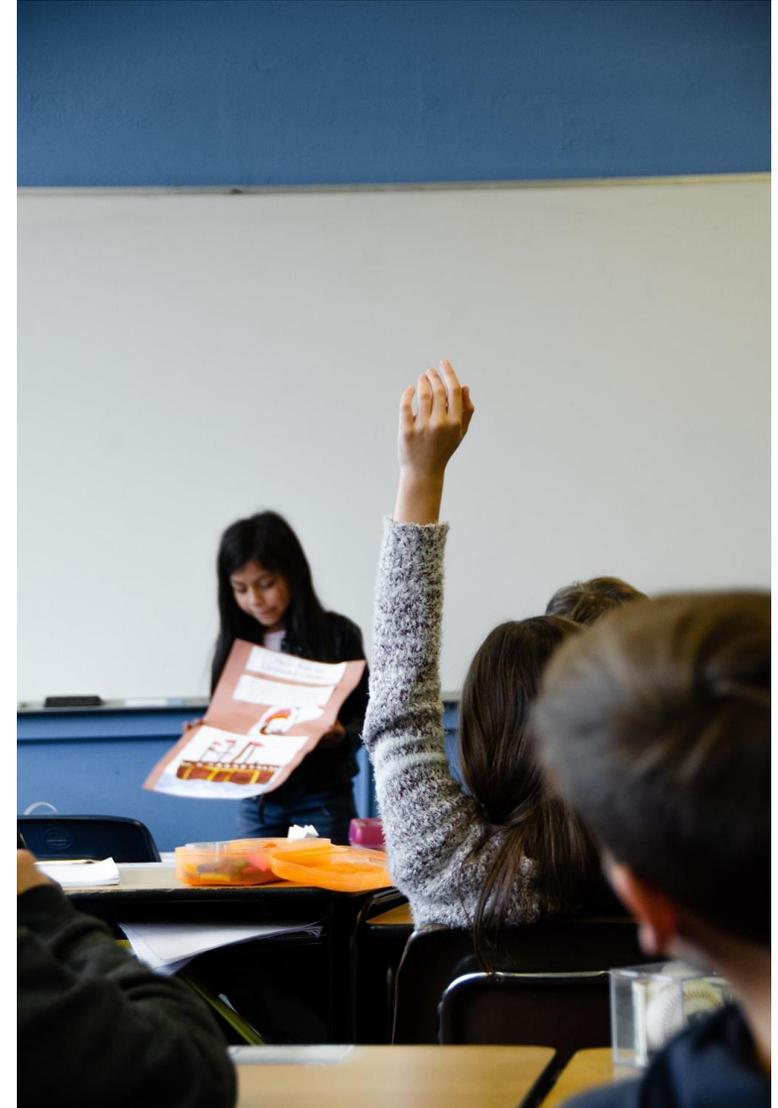

- Increases education rates for women and girls
 - Improves livelihoods and wellbeing
 - Reduces poverty
 - Relieves population pressure on:
 - Natural resources
 - Economic growth
 - Food production
 - Infrastructure development
 - State stability
 - Slower population growth reduces greenhouse gas emissions
 - Lessens climate vulnerability
-

Informed choice: enable women and couples to freely and responsibly determine the number, timing and spacing of their births.

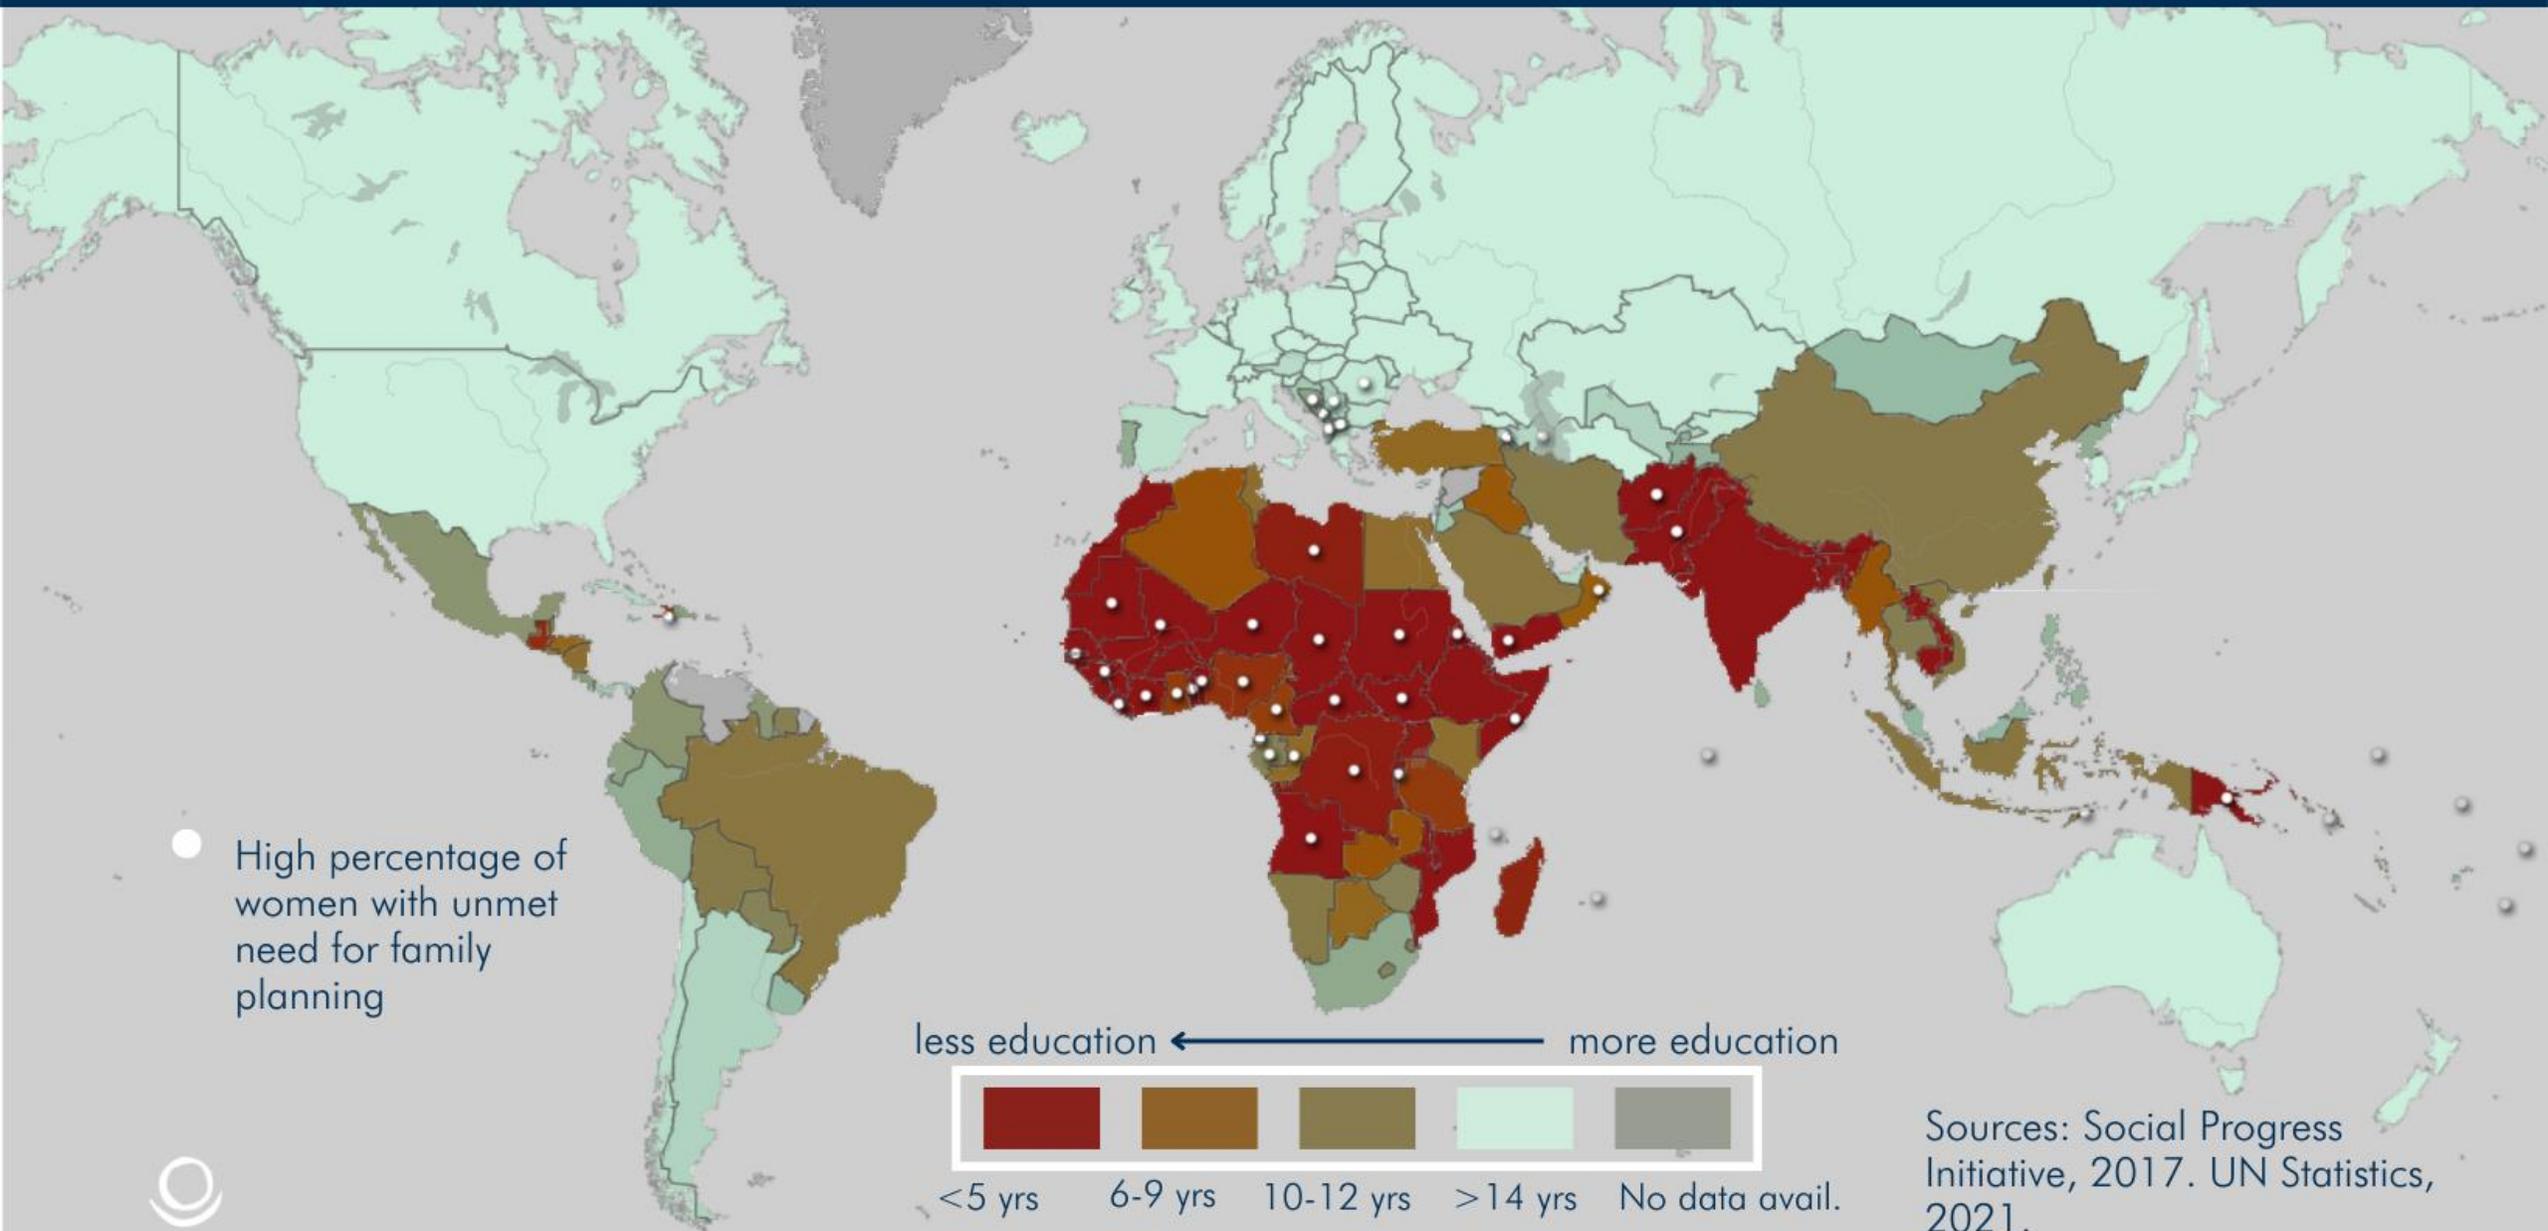

Solutions Through Health and Education

When education levels rise for women and girls, they gain social, political and economic power.

- Higher levels of education afford more options for sustained employment and help increase livelihoods.
 - More resources become available to help women and girls choose when and how to start a family.
- Women who are educated tend statistically to have fewer, healthier children.

Years of education for women & unmet need for family planning

Sources: Social Progress Initiative, 2017. UN Statistics, 2021.

Gender inequality intersects with climate change in ways that threaten the health, livelihoods, safety, and security of women and girls worldwide.

WORLD • CLIMATE CHANGE

Kenya Is Trying to End Child Marriage. But Climate Change Is Putting More Young Girls at Risk

Why climate change is creating a new generation of child brides

As global warming exacerbates drought and floods, farmers' incomes plunge - and girls as young as 13 are given away to stave off poverty

Ethiopian drought leading to 'dramatic' increase in child marriage, Unicef warns

With hunger across Horn of Africa and 600,000 children out of school, 'desperate' parents push more girls into early marriage

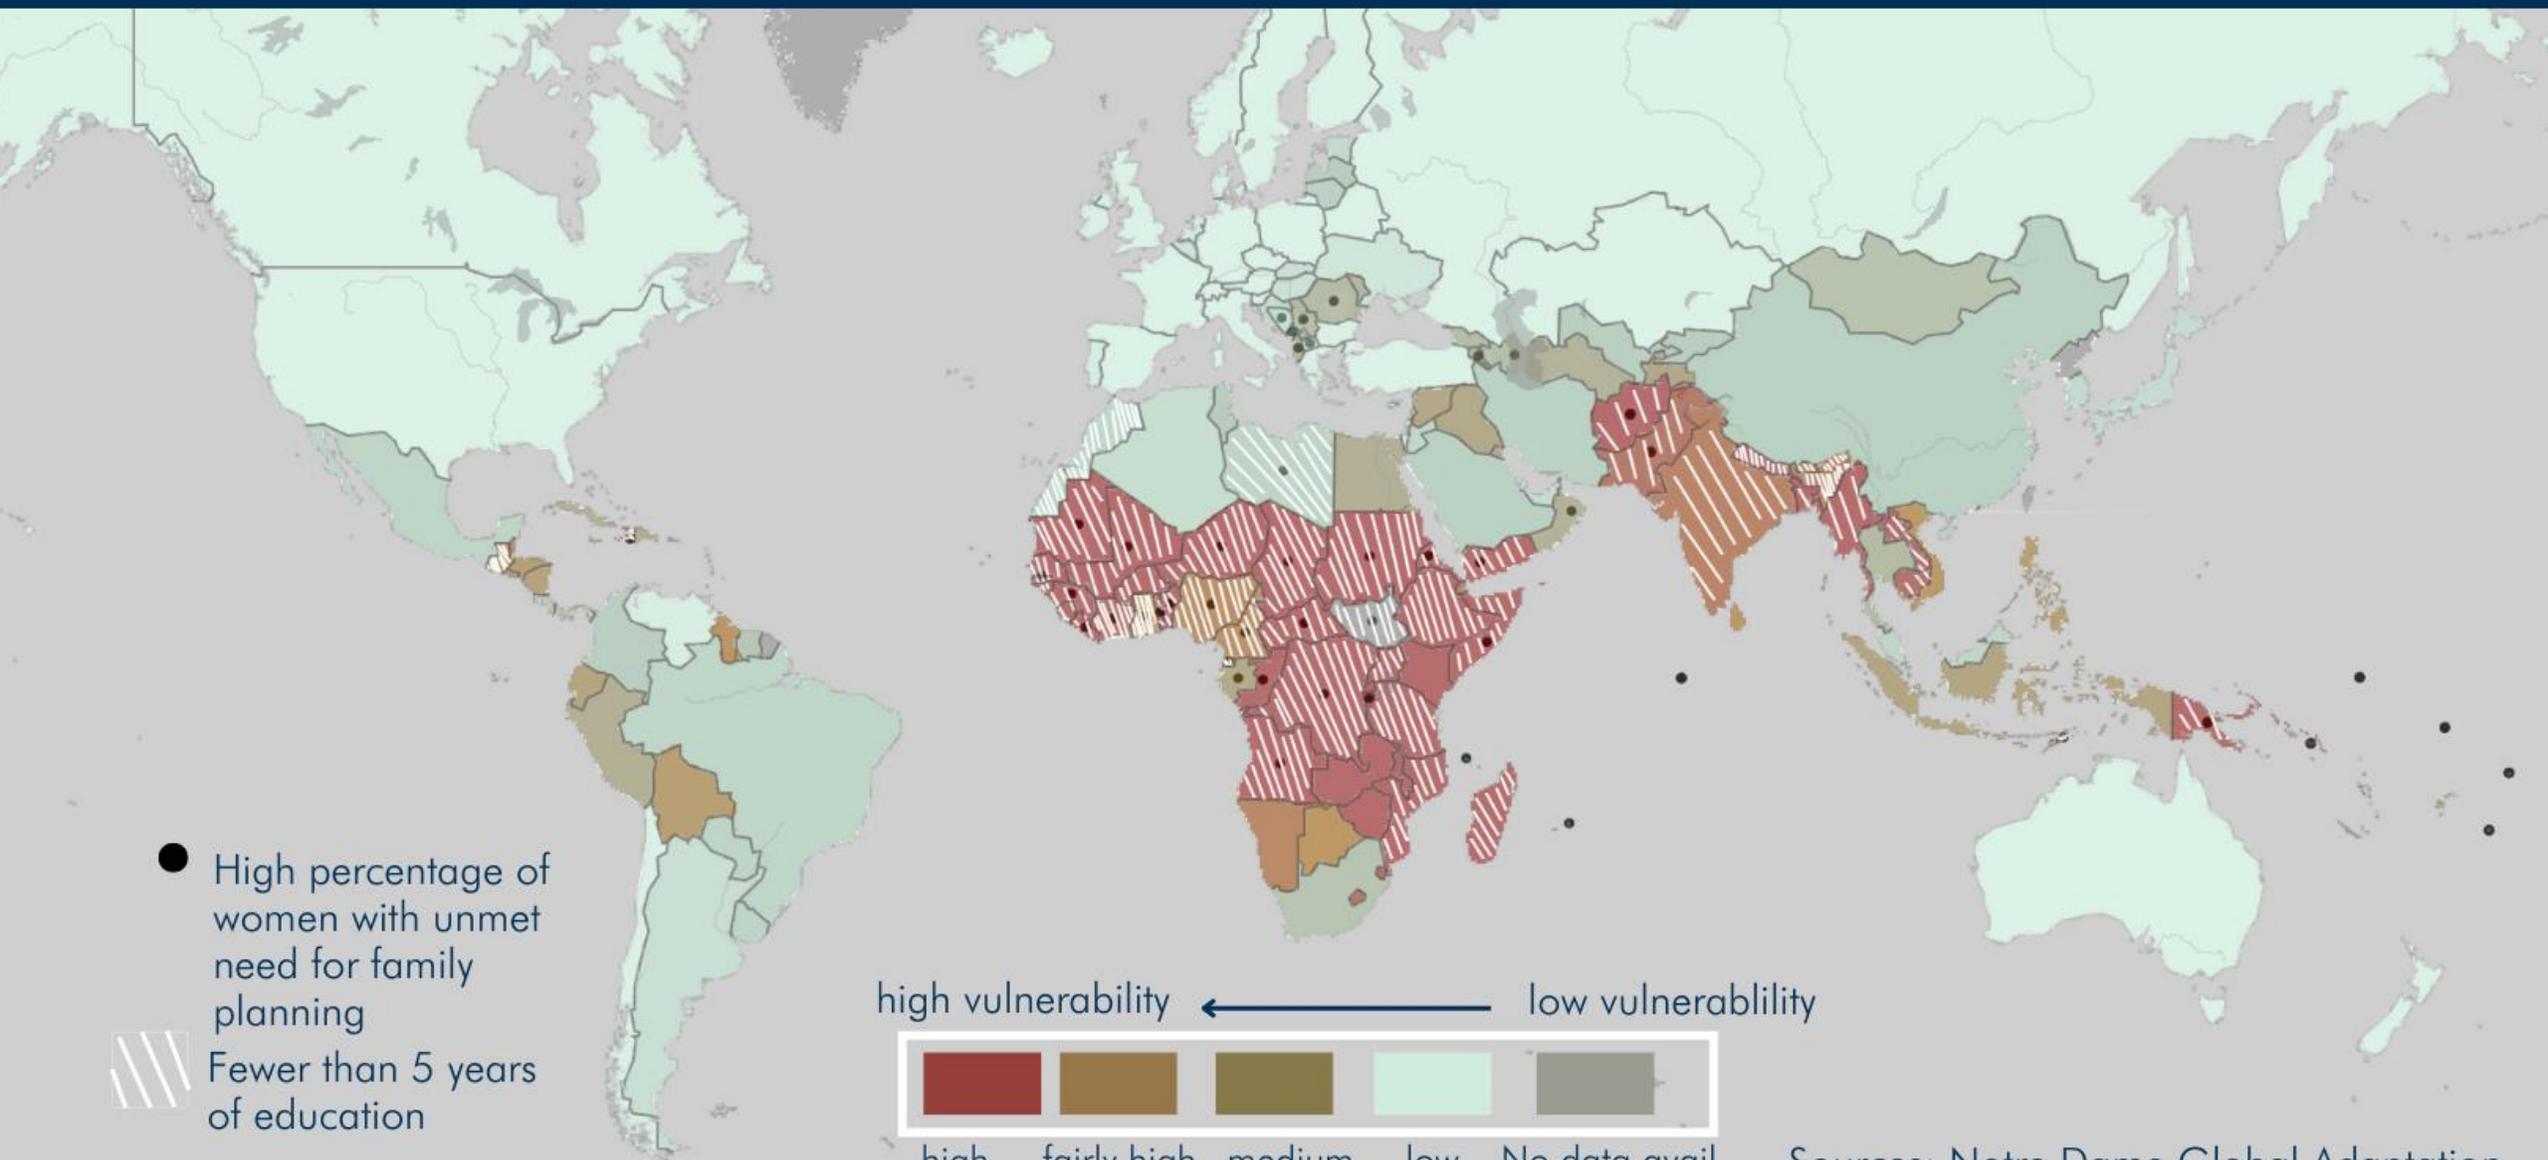

Displaced people queue to receive food aid last week at the Higlo camp in Gode, a town in the Somali region of Ethiopia. Photograph: Tiksa Negeri/Reuters

A woman with braided hair, seen from behind, carries a baby on her back using a colorful, patterned cloth. She is standing in a field of tall, green grass and plants, with palm trees visible in the background. The scene is captured in a cinematic style with soft lighting.

THE CLIMATE CRISIS IS A
REPRODUCTIVE JUSTICE
ISSUE

Climate vulnerability, years of education, & unmet need for family planning

● High percentage of women with unmet need for family planning

▨ Fewer than 5 years of education

high vulnerability ← low vulnerability

**GENDER EQUITY
IS A
CLIMATE
SOLUTION**

*Women and children
are healthier*

a fundamental aspect of
building climate
resilience

*Women become more
empowered*

increasing possibilities
for engaging in
climate adaptation
efforts

*Rates of unintended
pregnancies drop*

resulting in smaller families
and a reduced demand for
climate-sensitive resources
like food and water

Meeting women's needs for
FP/RH benefits climate
adaptation

*Slower population
growth*

lessens pressure on local
natural resources and
exposes fewer people to
climate impacts

Top 5 solutions to climate change

54.4
Tropical Forest Restoration

85.4*
Health and Education
(FAMILY PLANNING & EDUCATING GIRLS)

87.4
Reduced Food Waste

57.7
Refrigerant Management

65.0
Plant-rich Diets

*CO₂-equivalent reduction by 2050 (GT)
