DEFINITIONS OF CREATED VARIABLES

REGION

Middle Atlantic

Respondents who live in New York, New Jersey, or Pennsylvania.

East North Central

Respondents who live in Michigan, Illinois, Indiana, Wisconsin, or Ohio.

West North Central

Respondents who live in Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, or Kansas.

South Atlantic

Respondents who live in Delaware, Maryland, District of Columbia, West Virginia, North Carolina, South Carolina, Georgia, Virginia, or Florida.

West South Central

Respondents who live in Arkansas, Louisiana, Oklahoma, or Texas.

Mountain

Respondents who live in Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, or Nevada.

Pacific

Respondents who live in California, Oregon, Washington, Alaska, or Hawaii.

Northeast

Respondents who live in New England (Vermont, Rhode Island, New Hampshire, Maine, Massachusetts, Connecticut) or the Middle Atlantic regions.

Midwest

Respondents who live in the East North Central or West North Central regions.

South

Respondents who live in the South Atlantic, East South Central (Tennessee, Alabama, Mississippi, or Kentucky), or West South Central regions.

West

Respondents who live in the Mountain or Pacific regions.

SURVEY METHODOLOGY

Lake Research Partners designed and administered this mixed-method survey that was conducted from October 3 -10, 2024, by online, text to online (a portion of the sample received a text to their cell phone with a link to complete the survey online), and phone using professional telephone interviewers. The survey reached a total of 1,418 adults nationwide with a base of 1,018 which includes oversamples of 100 Black adults, 100 Latino/a adults, 100 Generation Z adults, and 100 Millennial adults. The oversamples were weighed down into their respective base samples to their proper proportion of the universe.

The data is statistically weighted to ensure the sample’s demographic reflects that of adults nationwide. The base was weighted by region, region by gender, age, party identification, and education. The Black adult sample was weighted by region, age, party identification, and education. The Latino/a adult sample was weighted by age. The Gen Z sample was weighted by gender, age, race, and party identification. The Millennial sample was weighted by gender, age, race, party identification, and education.

The margin of error for the base sample is +/-2.6%. In interpreting survey results, all sample surveys are subject to possible sampling error; that is, the results of a survey may differ from those which would be obtained if the entire population were interviewed. The size of the sampling error depends upon both the total number of respondents in the survey and the percentage distribution of responses to a particular question. For example, if 50% of respondents in a sample of 1,418 answered “Yes” to a particular question, we can be 95% confident that the true percentage will fall within 2.6 points, or from 47.4% to 52.6%. The margin of error for oversamples and subgroups is higher. The table on the next page represents the estimated sampling error for different percentage distributions of responses.

Quantitative results are expressed as percentages unless otherwise noted. Results may not add to 100% due to rounding or multiple responses.
